Make Your Boat Smell New!

Boat owners no longer have to contend with unpleasant fuel or musty smell odors, on their boats.

Spend more time on the water instead of the dock, cleaning-up

In the past, the only way to remove fish, mildew, rotten food, tobacco, human or even animal excretions odors could only be by spending hours washing the interior down with bleach or chlorine, having this smell, as well as the original smells, returning, because these dormant odors are re-activated by introducing moisture, and heat.

The alternative is spending a lot of money and stripping out the interior.

The most beautiful vessel will never seem clean, if it smells bad.

Now, O³Wizard's new Eco-friendly technology will temporarily remove the oxygen from the cabin, head or bilge, for a few hours, thereby organically sanitizing the area by killing the unwanted living organisms like mold, odors, bacteria, viruses, pests and neutralizing the unwanted smells.

Leather, vinyl, carpet and wood will smell new with our patent pending green technology, which is **EPA, FDA and USDA Approved**, and used by NASA's space program to make their environment more pleasant and healthy:

Economically / Effectively / Efficiently / Eco-friendly!

It will not harm or contaminate the contents of spacecraft or watercrafts.
